

User GuideManual

Introduction:

Easy-Inn firstly requires a user to register their details so as to create an account in order to use the system.

Process Overview:

Login Page: Login Page consists of text box for the users. Please add your login details. If you haven't registered your details, click on the register button and register your details. After registering your details, press the login button with your username and press again to login to the home page of the system.

Home Page: The home page consists of details of the hotels. You can search hotels according to hotel ratings or by price. If you want to register a hotel to the system, press the Register button to add a hotel. Enter the name of the hotel to check in to the hotel.

Searching via ratings: You can search for hotels by filtering through ratings. Enter the desired ratings you want to search for, the desired hotel details will be displayed. Enter the hotel name in the text box below to check-in.

Searching via price : You can search for hotels by filtering through price. Enter the desired price you want to search for, the desired hotel details will be displayed. Enter the hotel name in the text box below to check-in.

Register Button: On pressing the Register button on the Home Page, a new page gets displayed. Add the details of the hotels you want to register to the system. Press the

Register button to register the hotels. After validation, your hotel will get displayed in the main page.

Update Button : In order to update the values in table, please select the row of data which you want to edit in the table. After selecting the rows, the values of the row are seen in the register text fields, where you can update the data. After editing the data, press the update button to update in the table

Clear Button: On pressing clear button, the registered hotels gets cleared from the system.

Check-In Button: On pressing the check-in button, enter your check-in details. After validation of details, you will be checked in to the hotel.

Importing Hotel details from csv file: You can also import your hotel details via csv file. Click on File menu and enter open or press ctrl+O, add .csv file containing the hotel details, which will be added to the system.
